

CERTPOINT is Proud to Announce Release of VLS 5.6

Long Island, NY., September, 2007- It seems as though we just finished sharing with our Client Community all of the upgrades that made VLS 5.5 a leading LMS in the global industry. Keeping with that momentum, CERTPOINT is anxious to deliver VLS 5.6 to the Client Community and beyond, keeping you ahead of the e-Learning curve!

Some of the features that users can anticipate in the latest version of our flagship product are Arabic language support, and upgrades to the Competency Management System.

The Competency Management System (CMS) is an organized approach to determining the courses that are necessary for proper job training. Within the CMS function of VLS, the overall functionality of the Portal has been improved, making it easier to navigate between assessments, courses, activities and reports within the system.

Notification enhancements have been made within the Administrator function, allowing HTML messages which keep users, assessors, and administrators up to date on the status of competency assessments and activities.

Additional upgrades to VLS 5.6 include a simplified process of creating and managing CMS objects which will allow administrators to create and manage Competency Assessments using a single interface, and six new reports that display data regarding CMS scores earned by users in VLS.

About CERTPOINT

CERTPOINT provides comprehensive knowledge transfer solutions that allow global enterprises to rapidly deliver revenue-generating product and service knowledge throughout learning, sales, marketing and customer support channels.
